

12.Flows

Record-triggered flows are a powerful automation tool in Salesforce that can streamline business processes, reduce manual work, and improve productivity. They can be used to automate a wide range of tasks, from simple to complex, and can be tailored to meet the unique needs of your organization.

The image displays the Salesforce Flow Builder interface. The top section shows a canvas for building a flow, starting with a 'Record-Triggered Flow Start' event, followed by a 'Run Immediately' action, then a 'Student Record Creation' action, and finally an 'End' state. The bottom section shows the 'Flow Definitions' list, which contains a table of various flows.
